Overview

This report presents the correlations between CD4/CD8 T-cell responses measured through ICS assay and the B-cell response measured through BAMA, GTL ADCC and NAb assays for the groups receiving NYVAC-C-KC vaccines (Groups 5 and 6).

List of Figures

1	Group 5, ICS v/s BAMA by cytokine and pooled antigen colored by T-cell population. The fitted simple linear regression line and Spearman correlation are indicated.	2
2	Group 5, ICS v/s ADCC GTL assay by cytokine and pooled antigen colored by T-cell population. The fitted simple linear regression line and Spearman correlation are indicated.	3
3	Group 5, ICS v/s NAB assay by cytokine and pooled antigen colored by T-cell population. The fitted simple linear regression line and Spearman correlation are indicated.	4
4	Group 6, ICS v/s BAMA by cytokine and pooled antigen colored by T-cell population. The fitted simple linear regression line and Spearman correlation are indicated.	5
5	Group 6, ICS v/s ADCC GTL assay by cytokine and pooled antigen colored by T-cell population. The fitted simple linear regression line and Spearman correlation are indicated.	6
6	Group 6, ICS v/s NAB assay by cytokine and pooled antigen colored by T-cell population. The fitted simple linear regression line and Spearman correlation are indicated.	7
7	Plot showing correlation between T-cell ICS assay and B-cell assays in Group 5 faceted by CD4/CD8 T-cell populations and ordered by median correlation for each cytokine antigen combination.	8
8	Plot showing correlation between T-cell ICS assay and B-cell assays in Group 6 faceted by CD4/CD8 T-cell populations and ordered by median correlation for each cytokine antigen combination.	9

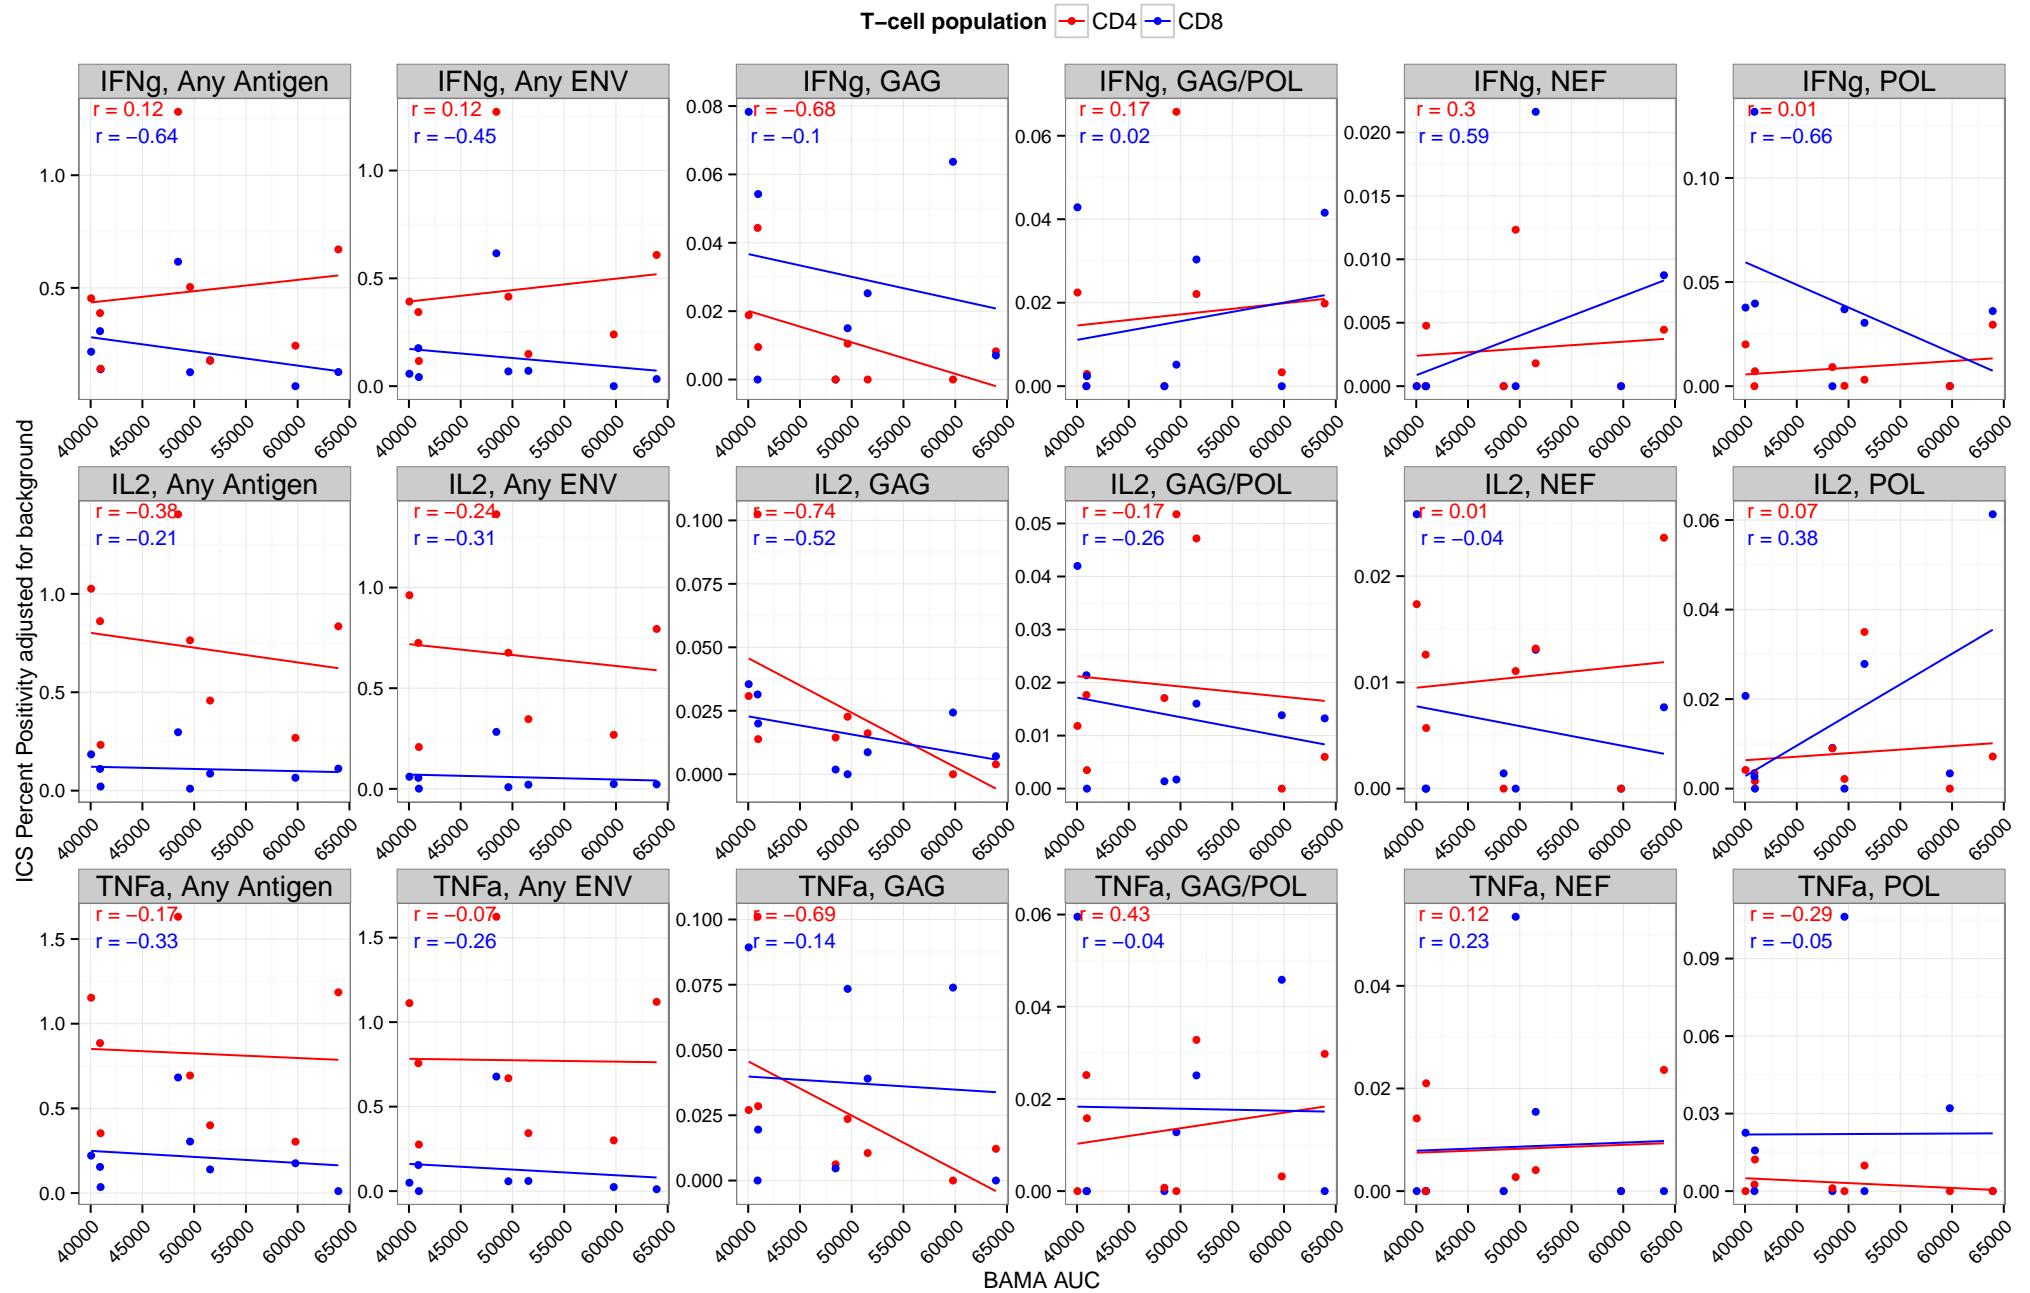

Figure 1: Group 5, ICS v/s BAMA by cytokine and pooled antigen colored by T-cell population. The fitted simple linear regression line and Spearman correlation are indicated.

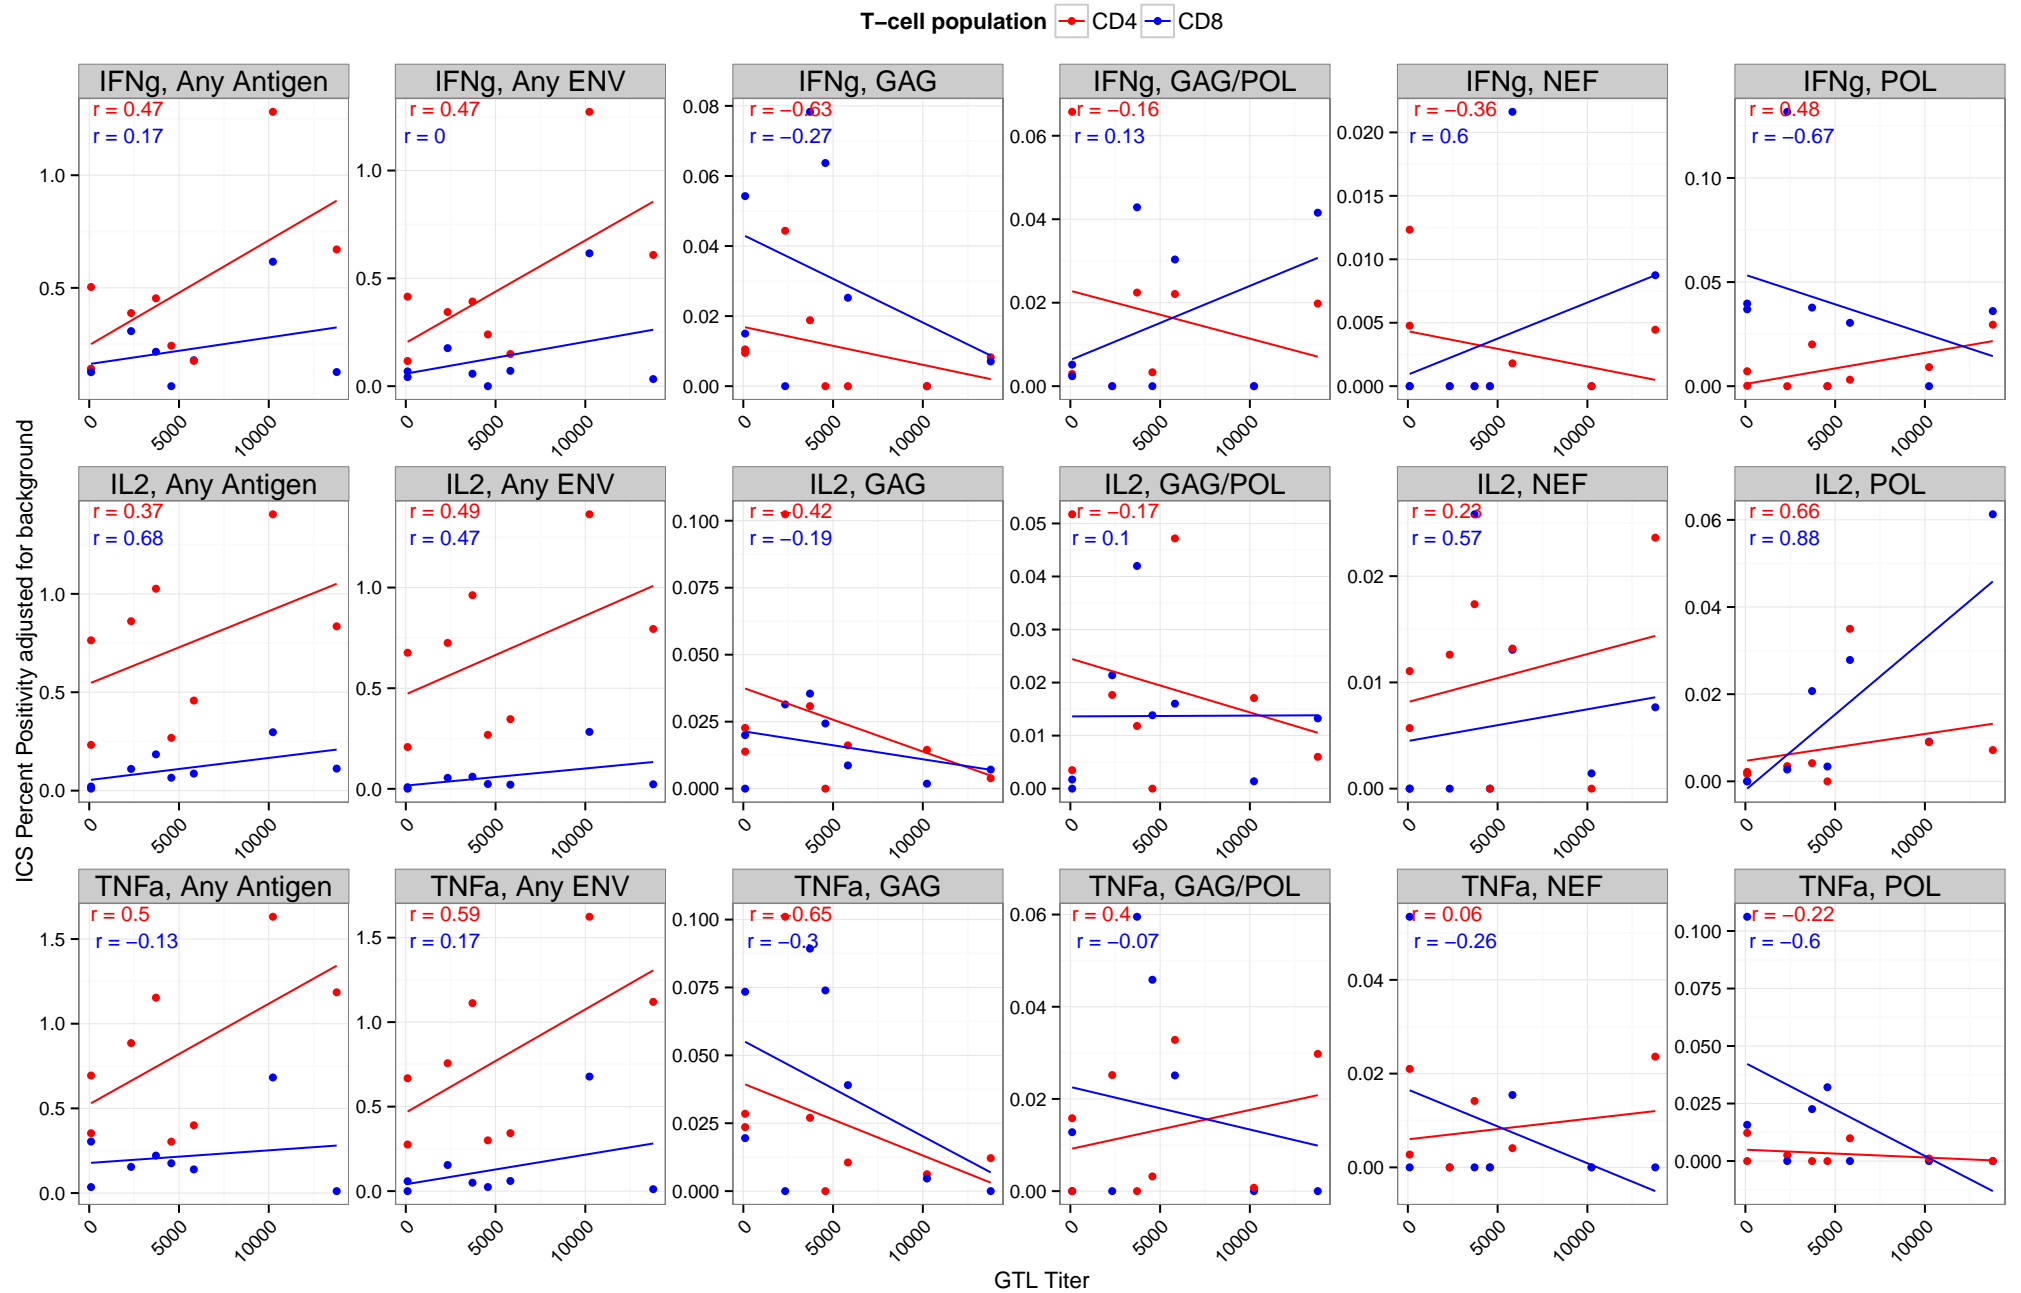

Figure 2: Group 5, ICS v/s ADCC GTL assay by cytokine and pooled antigen colored by T-cell population. The fitted simple linear regression line and Spearman correlation are indicated.

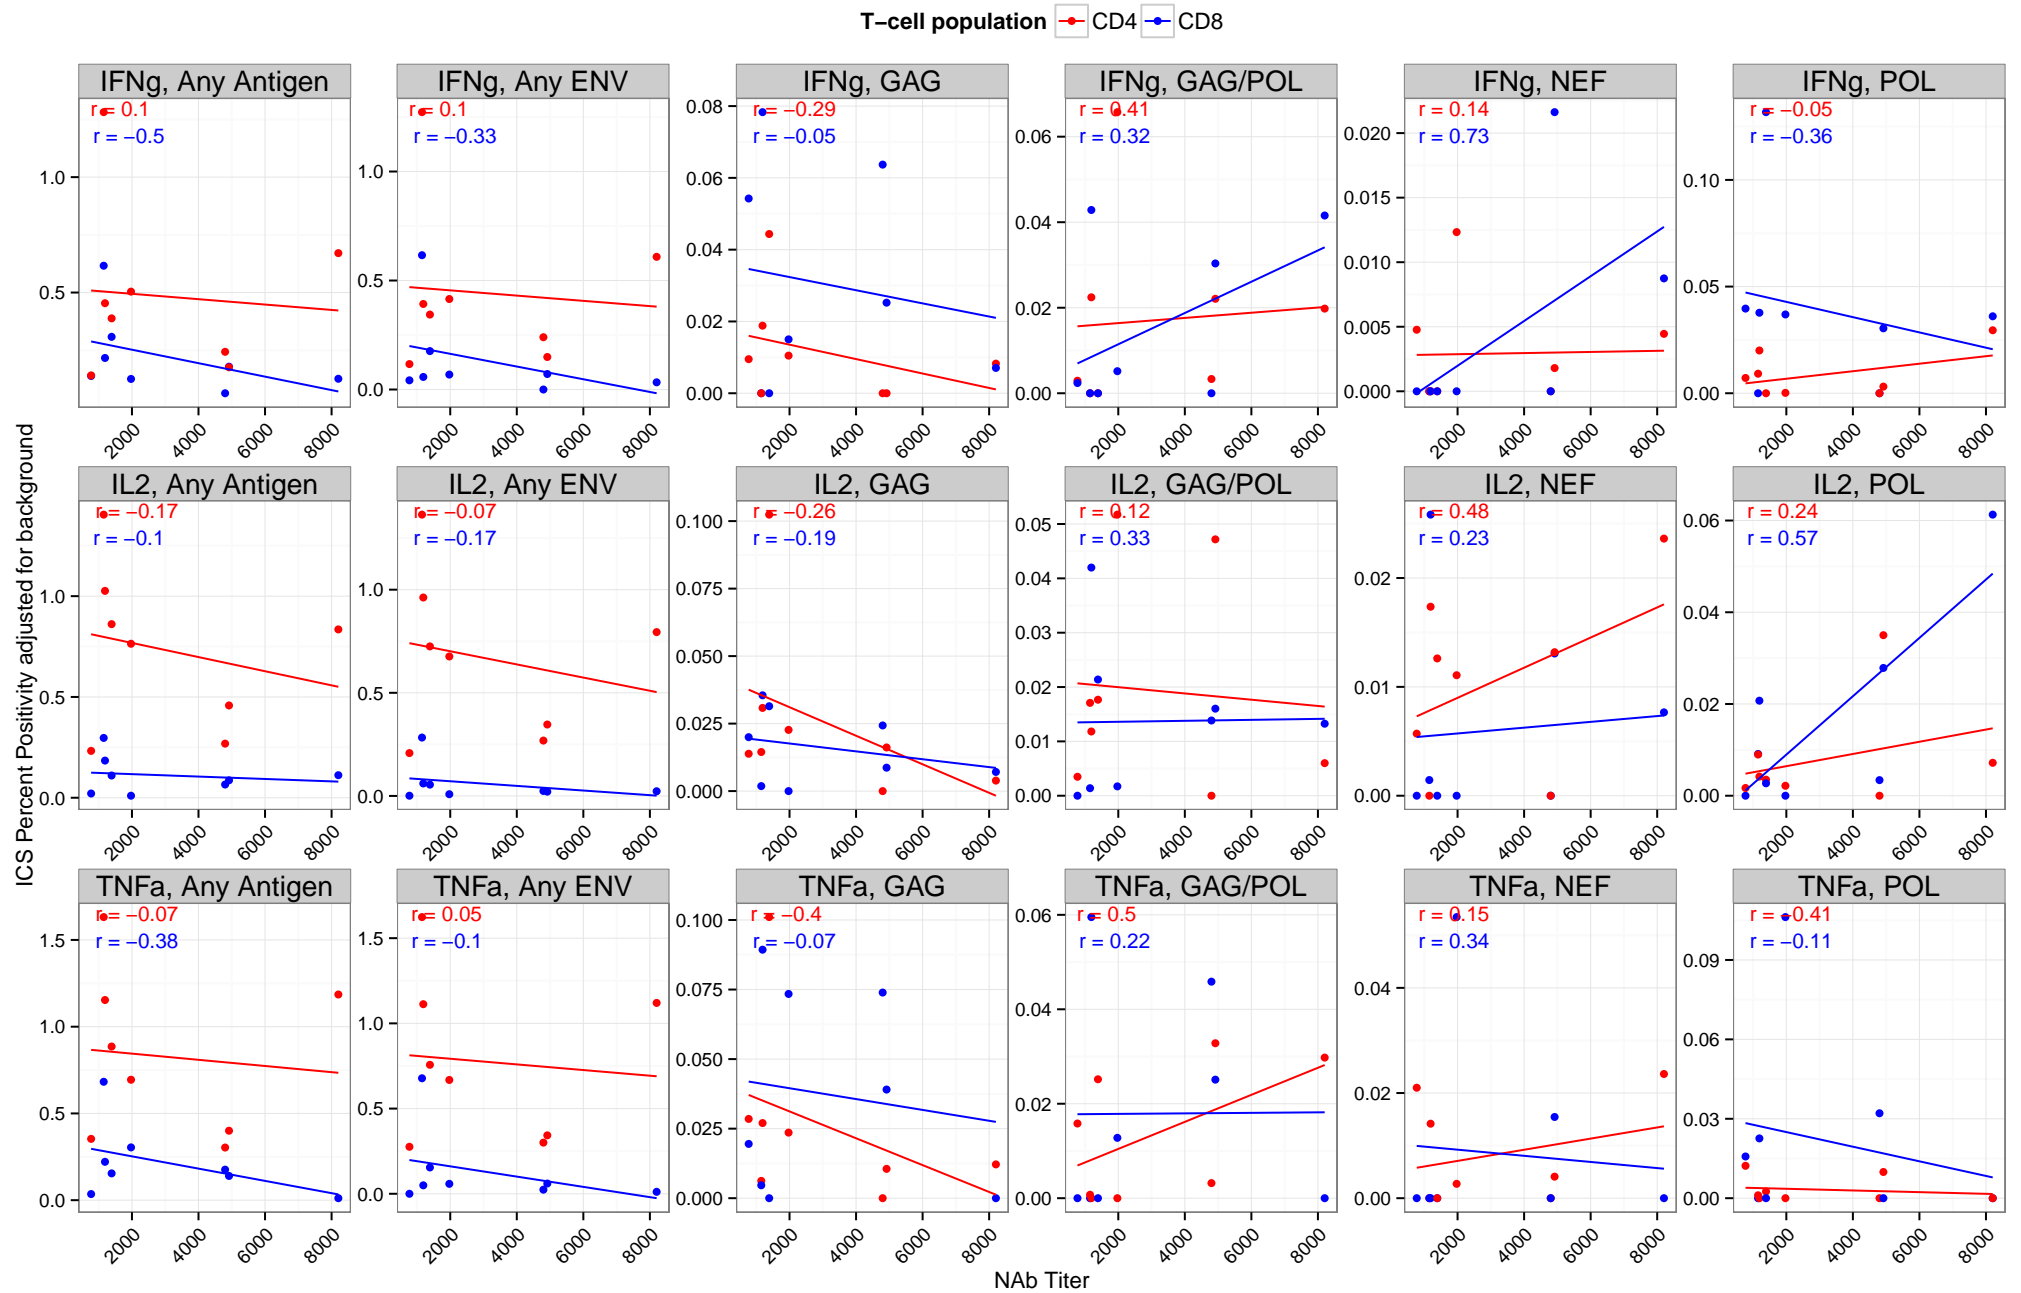

Figure 3: Group 5, ICS v/s NAB assay by cytokine and pooled antigen colored by T-cell population. The fitted simple linear regression line and Spearman correlation are indicated.

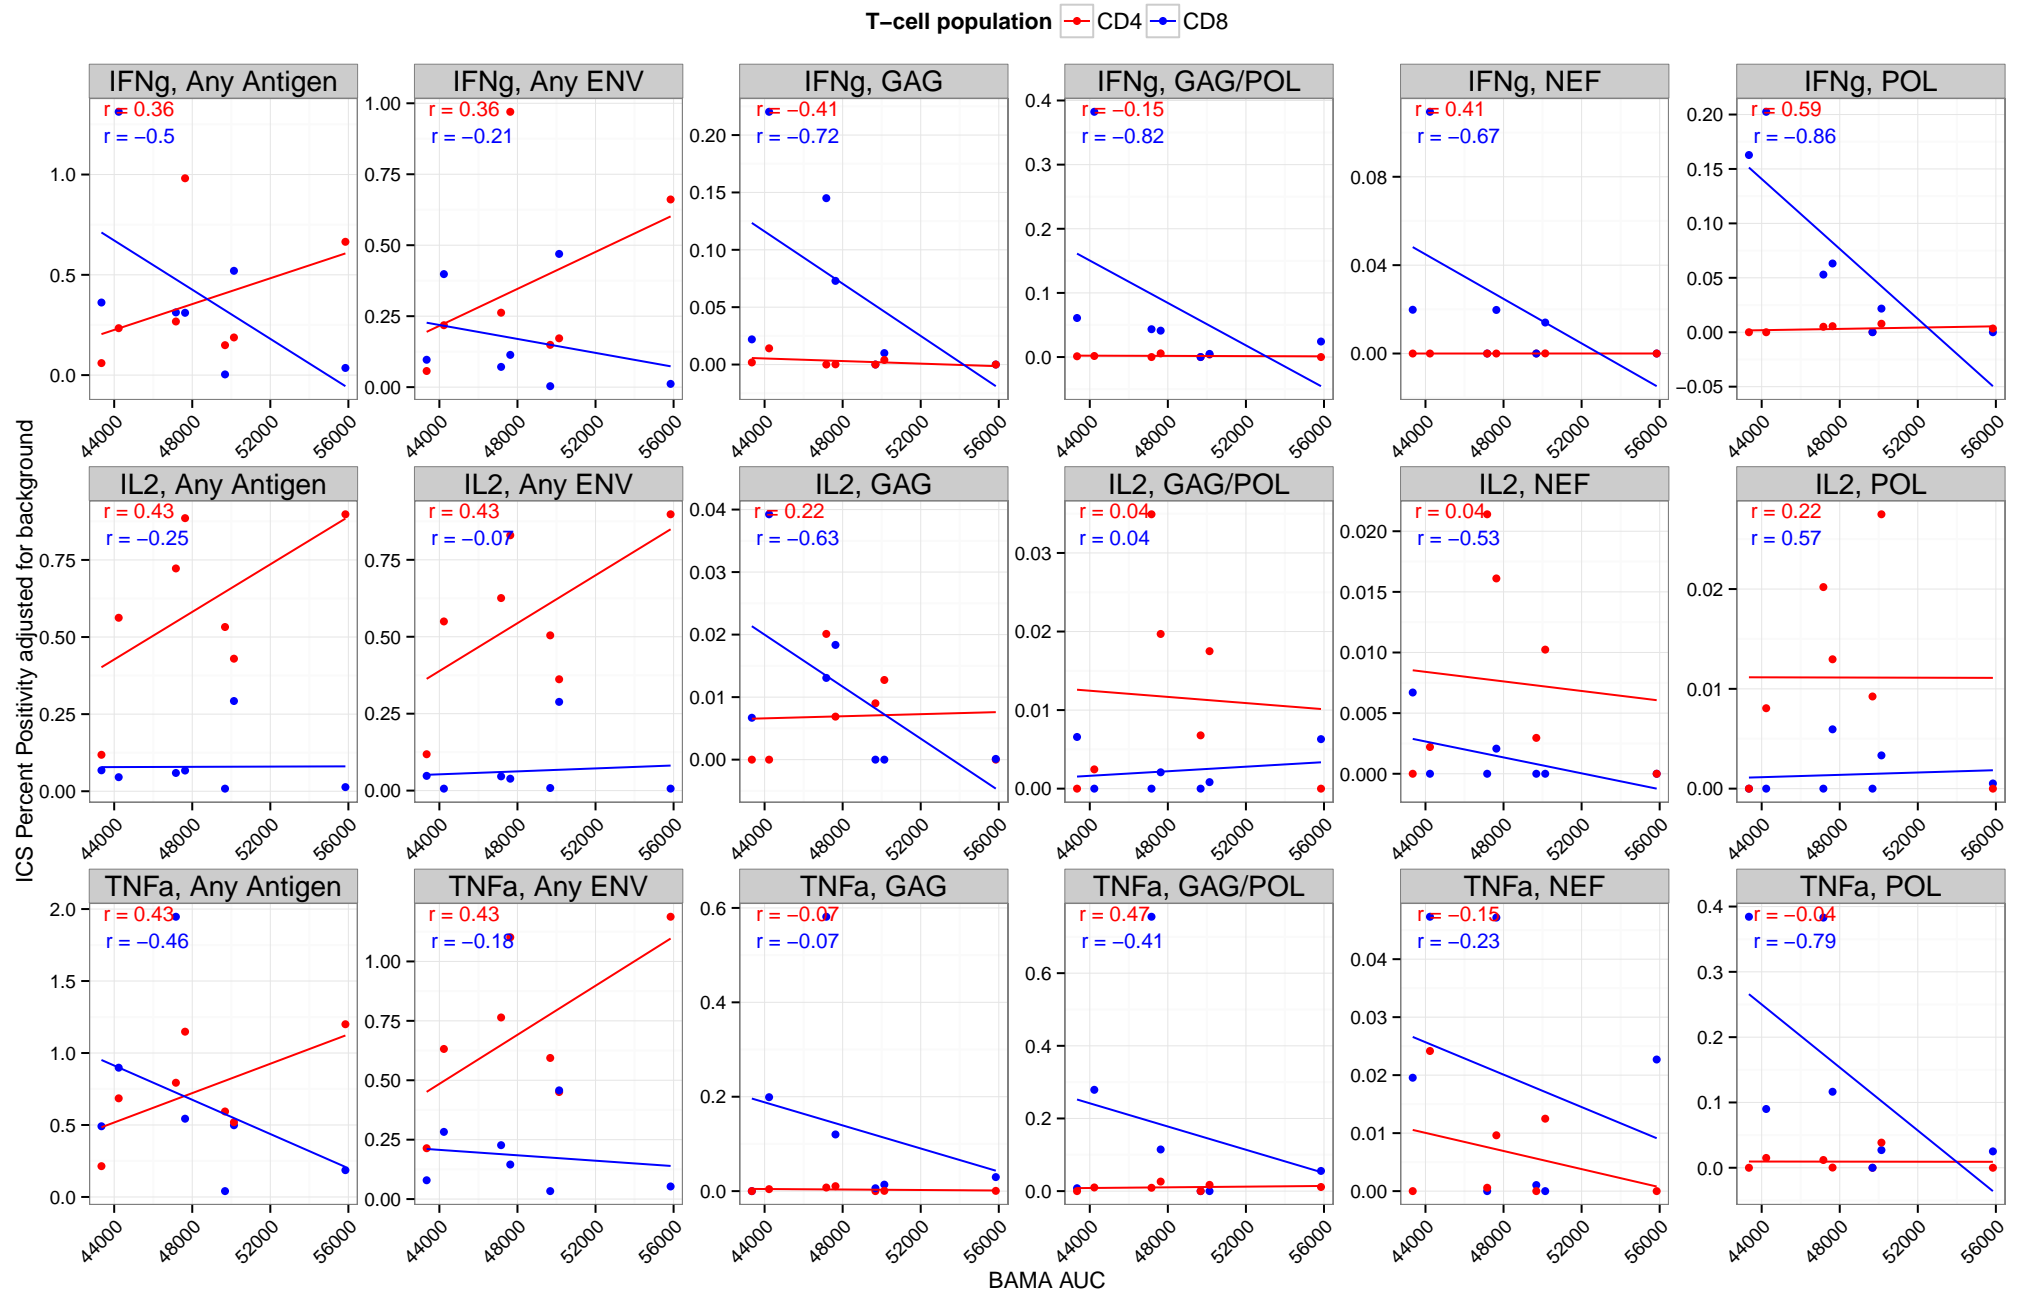

Figure 4: Group 6, ICS v/s BAMA by cytokine and pooled antigen colored by T-cell population. The fitted simple linear regression line and Spearman correlation are indicated.

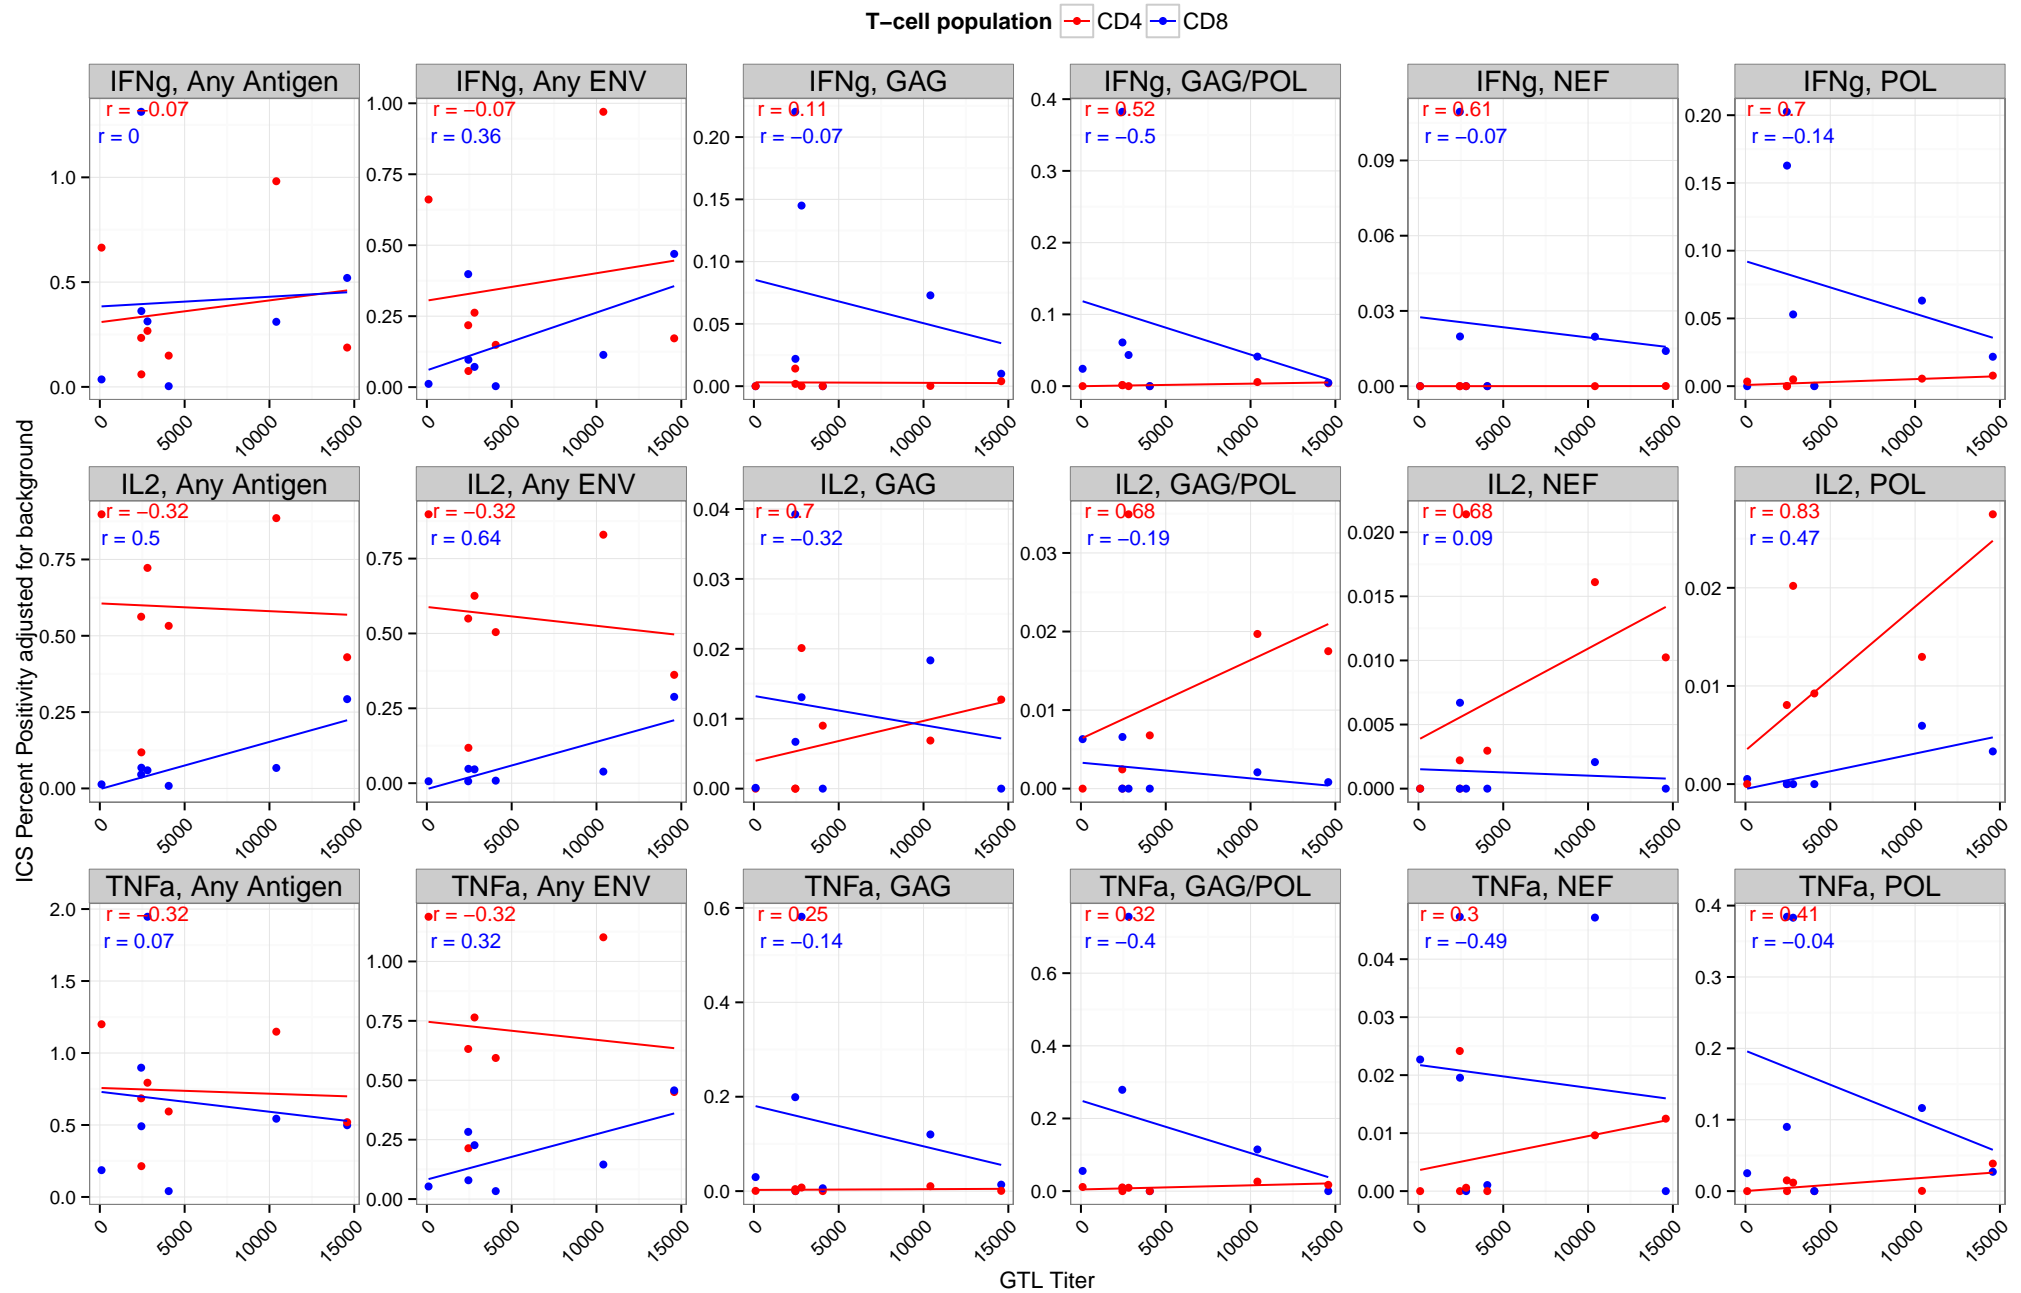

Figure 5: Group 6, ICS v/s ADCC GTL assay by cytokine and pooled antigen colored by T-cell population. The fitted simple linear regression line and Spearman correlation are indicated.

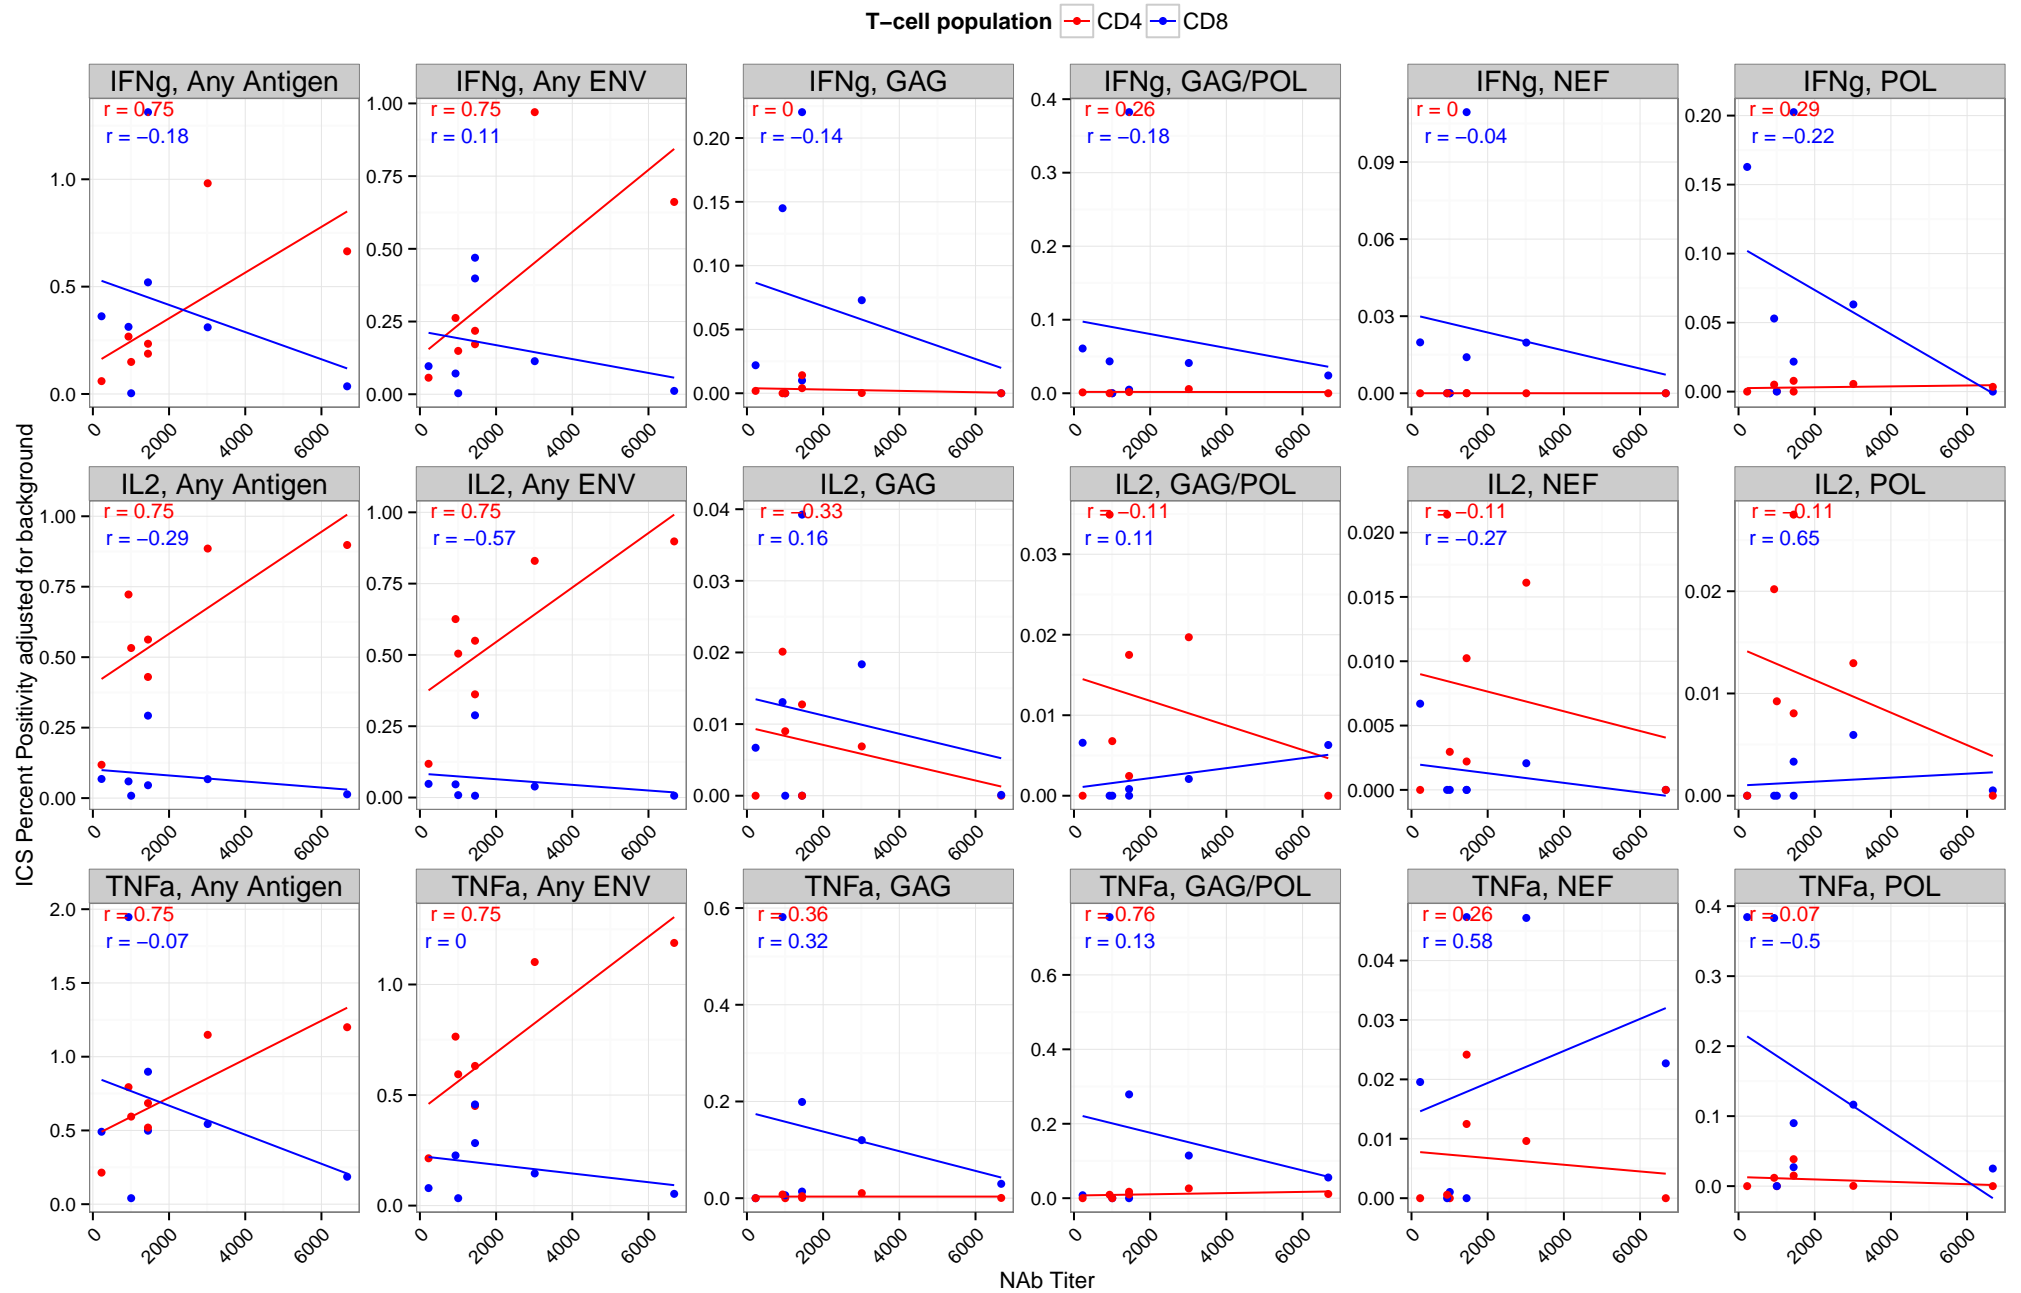

Figure 6: Group 6, ICS v/s NAB assay by cytokine and pooled antigen colored by T-cell population. The fitted simple linear regression line and Spearman correlation are indicated.

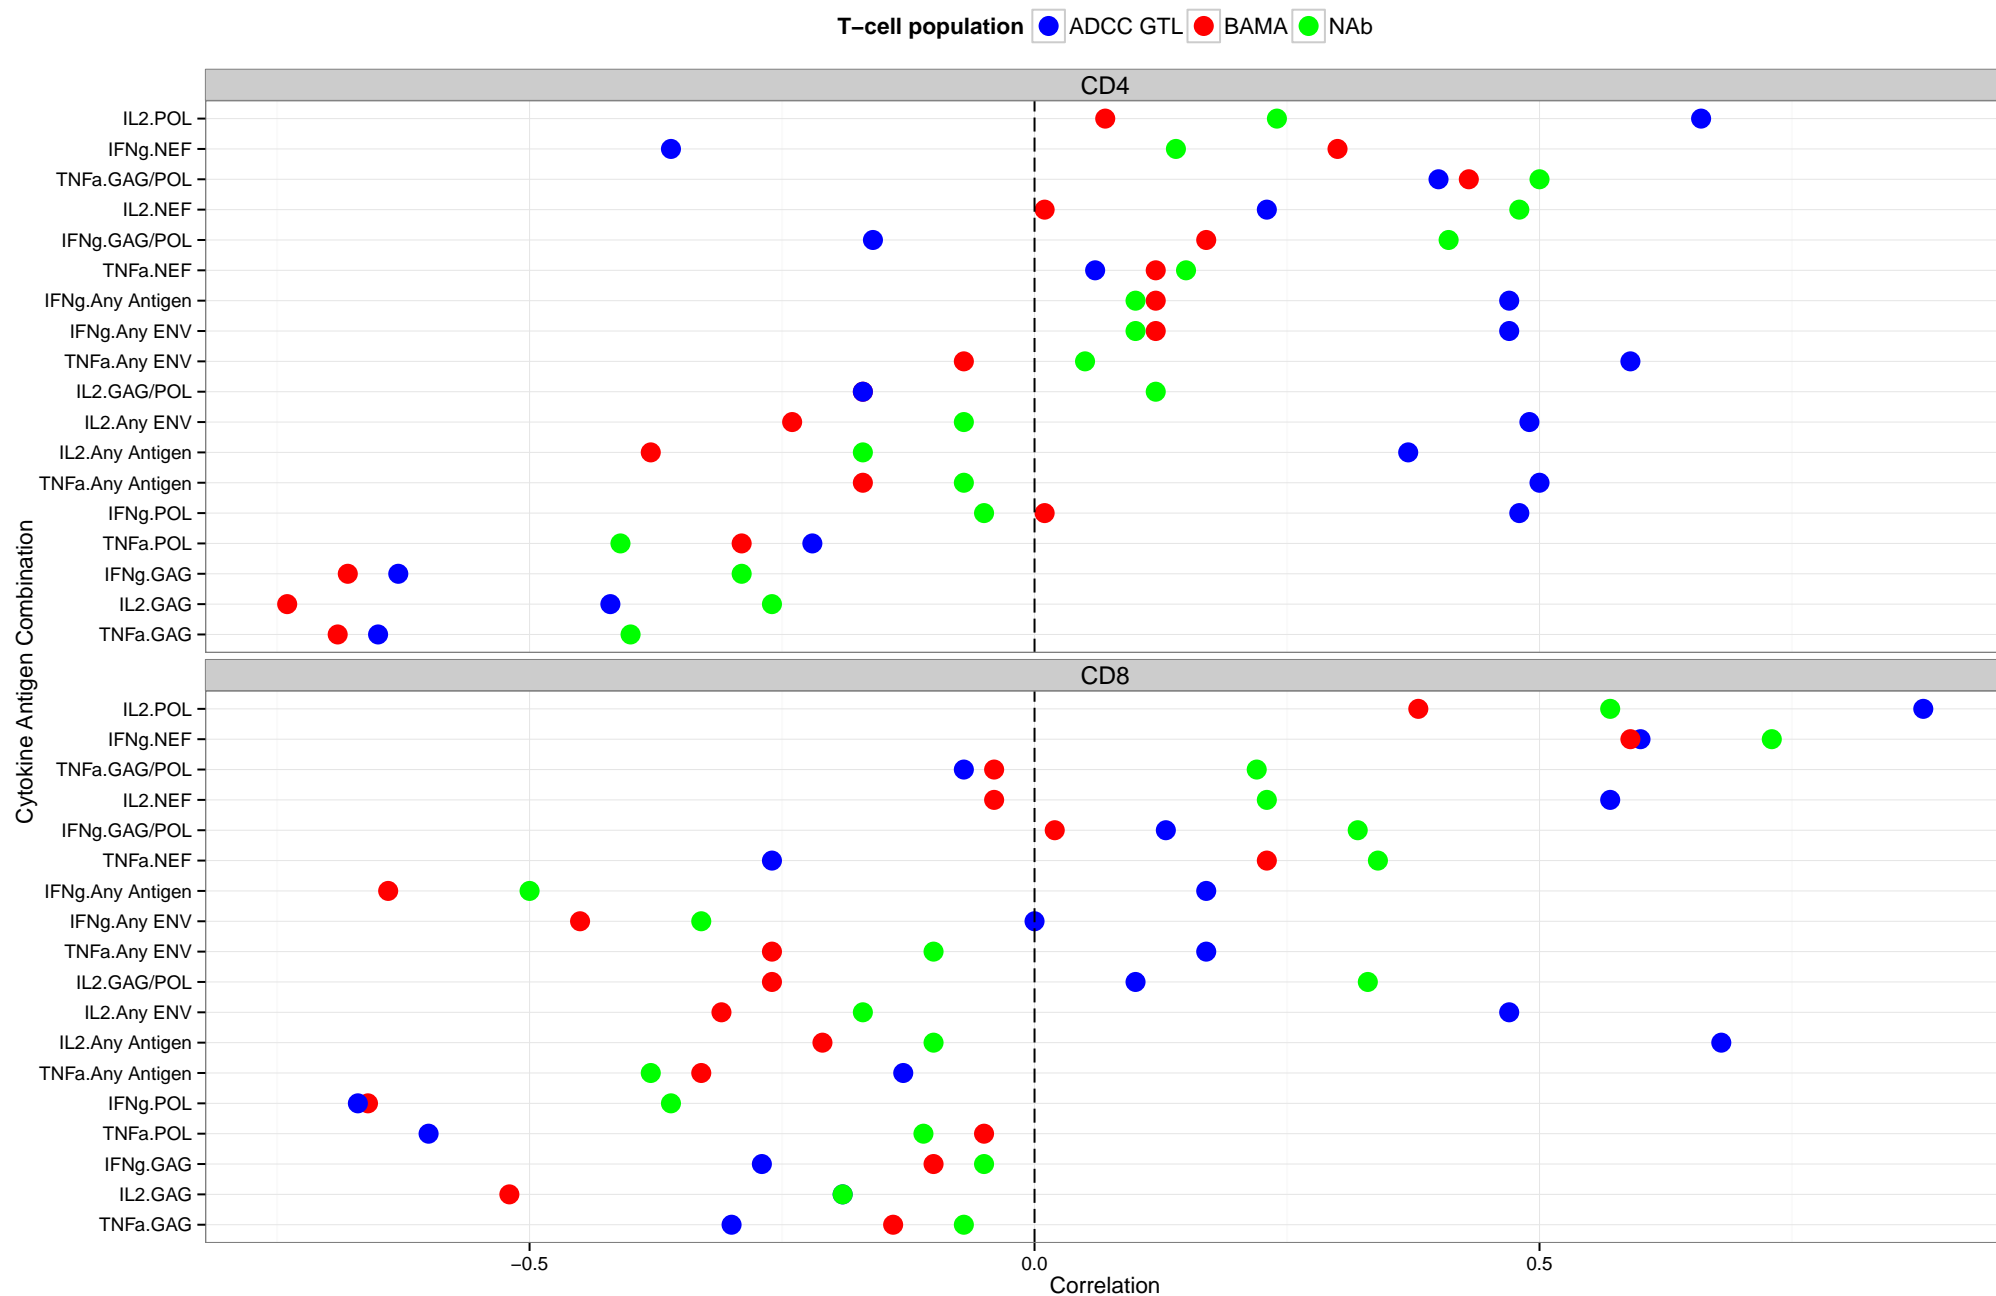

Figure 7: Plot showing correlation between T-cell ICS assay and B-cell assays in Group 5 faceted by CD4/CD8 T-cell populations and ordered by median correlation for each cytokine antigen combination.

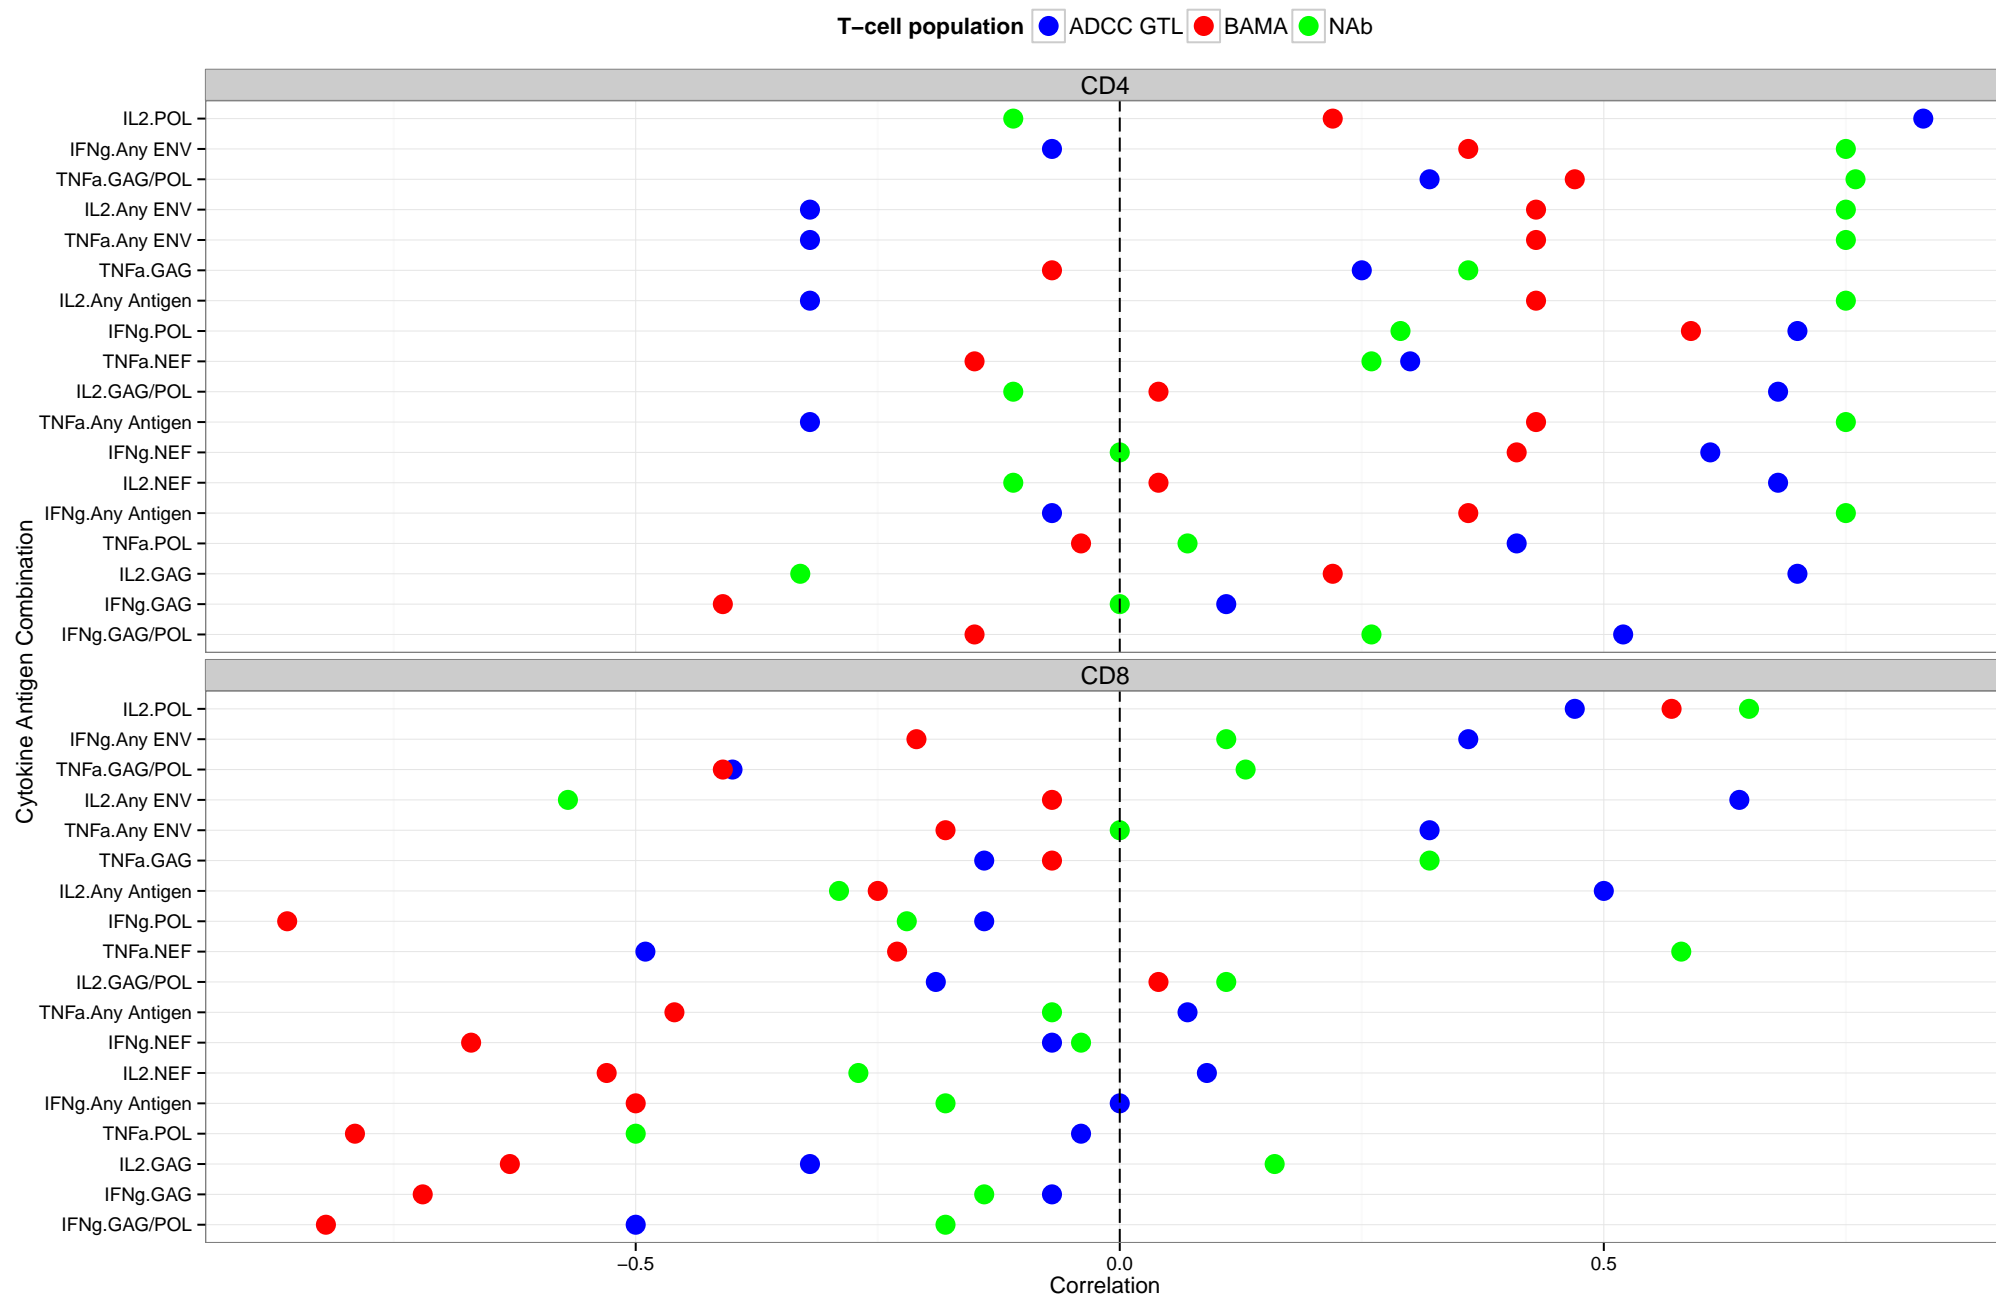

Figure 8: Plot showing correlation between T-cell ICS assay and B-cell assays in Group 6 faceted by CD4/CD8 T-cell populations and ordered by median correlation for each cytokine antigen combination.
